

HEALTH

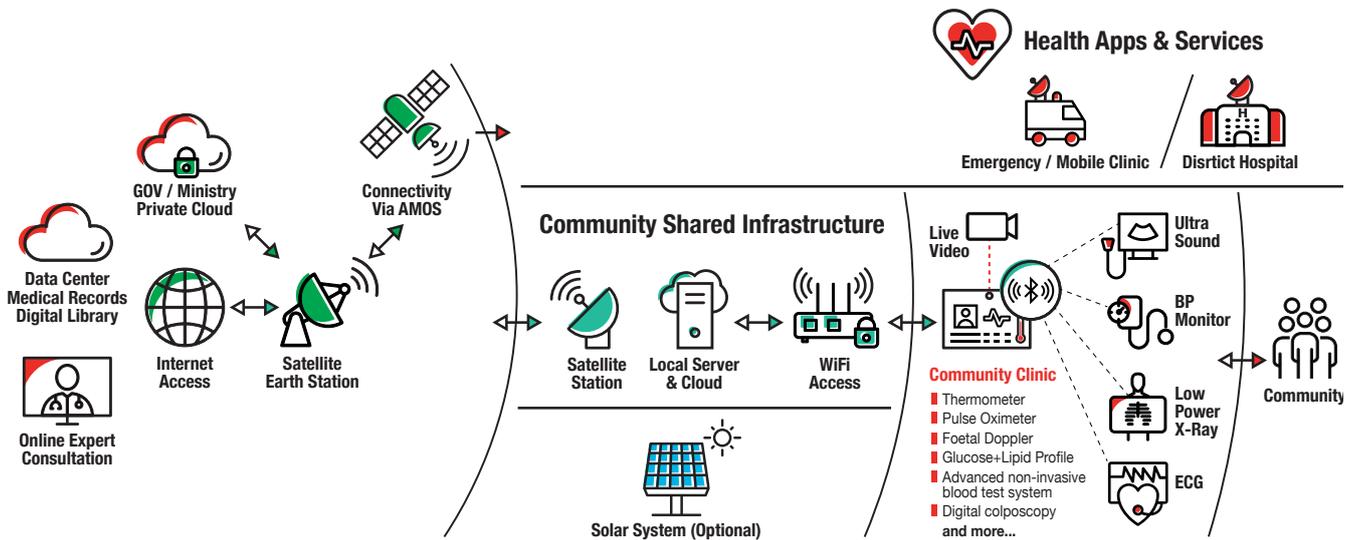

**LEADING THE WAY TO
A CONNECTED FUTURE**

Breaking access barriers for a healthier future

One of the key issues facing rural African communities is lack of nearby clinics. With poor roads, far-off clinics and no connection between rural communities and medical hubs, these communities are limited to basic medical diagnostics and treatments and are cut-off from global medical data and physician consultancy available today. With modern satellite-based connectivity as the

only economically feasible way of connecting semi-urban and rural clinics, Spacecom's solution is designed for the needs of remote medical teams. Adjusted to operate on off-grid solar power – it provides electricity, connectivity, early symptom detection, diagnostics, monitoring, training, and data analysis in the most energy-efficient, sustainable way possible.

The advantages of Spacecom's solution for local medical teams

- Access to new medical treatments and procedures
- Online detection, diagnosis, and treatment of illnesses
- Data analysis over the cloud
- Real-time communication and consultation through digital health apps
- Immediate access to medical experts within the country and across the globe
- The ability to be informed of all global health issues
- Crucial information on disease prevention
- WiFi access without consuming mobile data

About Spacecom

Spacecom (TASE: SCC) is a Satellite communication provider, and proprietary owner and operator of the AMOS satellite fleet. It's recent addition, AMOS-17, is a fully digital and advanced High Throughput Satellite (HTS) which further expands Spacecom's reach over Africa, Middle East and Asia.

Operating since 1992, the company has built a strong standing as an innovator in its field, and serves as a partner to its customers, providing satellite connectivity, network optimization technologies, consultation and tailored solutions to suit their specific needs and drive business growth.

Spacecom's solutions include managed services, professional services, turn-key solutions, Cellular Backhaul, trunking solutions as well as broadcast, data and broadband satellite services. Spacecom's customers include ISPs, Telco's and MNO's, DTH / OTT operators, network integrators and government agencies, for both civil and homeland security.

Spacecom provides vast, reliable coverage over Africa, Asia, Europe and the Middle-East, via it's satellite fleet which includes AMOS-3 and AMOS-7 satellites co-located at 4°W, AMOS-4 at 65°E, and AMOS-17 at 17°E. The company also holds various teleports strategically positioned in Africa, the Middle East, North America and Europe.
